What is claimed is:

5

10

15

- 1. A coherent optical beam modulating device comprising:
 - an optical modulator array, where said optical modulator array includes an asymmetric stepped quantum well doped with electrons, wherein the modulator array operates as at least one of a phase modulator and a light intensity modulator base upon a voltage bias applied across the modulator array.
- 2. The coherent optical beam modulating device according to claim 1, wherein an excited state of the stepped quantum well changes with the voltage bias.
- 3. The coherent optical beam modulating device according to claim 2, wherein the asymmetric stepped quantum well is a hybridized array.
- 4. The coherent optical beam modulating device according to claim 3, where the hybridized array includes a plurality of pixels arranged in a periodic pattern.
- 5. The coherent optical beam modulating device according to claim 4, where the grating has a waffle pattern, where said waffle pattern is oriented at 45° with respect to the pixel edges.
- 6. The coherent optical beam modulating device according to claim 3, where said hybridized array uses a finite size of pixels with a finite number of grating periods.
- 7. The coherent optical beam modulating device according to claim 3, where the hybridized array includes a plurality of wet etched pixels.

- 8. The coherent optical beam modulating device according to claim 2, wherein the asymmetric stepped quantum well is at least one of a linear array, a two dimensional array and a reflective array.
- 9. A system for coherent optical beam modulating comprising:

20

- a coherent optical signal, where the optical signal is at least one of a transmitted signal and a reflected signal; and
 - at least one modulating array capable of reflecting and transmitting the optical signal, where the at least one modulating array continuously affects the optical signal with respect to a voltage bias applied across the at least one modulating array.
 - 10. The system for coherent optical beam modulating according to claim 9, where the at least one array includes an asymmetric stepped quantum well.
 - 11. The system for coherent optical beam modulating according to claim 9, where the at least one array is a hybridized array, where the hybridized array includes a plurality of pixels that define a grating.
 - 12. The system for coherent optical beam modulating according to claim 11, where the hybridized array includes a plurality of wet etched pixels that define a grating.
 - 13. The system for coherent optical beam modulating according to claim 9, where the at least one array includes at least one of a linear array, a two dimensional array and a reflective array.
